

Netzwerk Academy's Python Development Course

CORE PYTHON:

1. Basics

- 1.1 Installation
- 1.2 Environment Setting
- 1.3 SDK for Code Execution
- 1.4 Python Pros and Cons
- 1.5 Advantages of Python

2. Data types

- 2.1 Mutable and Immutable Categories
- 2.2 Data Type Representation

3. Conditional statements

- 3.1 if else if and else
- 3.2 while statement

4. Loops and control statements

- 4.1 __iter__ and __next__
- 4.2 break and continue statement
- 4.3 enumerate
- 4.4 range
- 4.5 else in for loop

5. Strings

- 5.1 Inbuilt Function Manipulation

6. List

- 6.1 Inbuilt Function Manipulation

7. Tuples

- 7.1 Inbuilt Function Manipulation

8. Dictionaries

- 8.1 Inbuilt Function Manipulation

9. Functions

- 9.1 Types of Functions
- 9.2 return statement
- 9.3 Function Scoping
- 9.4 Execution of Nested Function

10.Exception handling

- 10.1 Types of Exception and Exception Base class
- 10.2 Types of except block
- 10.3 optimized Exception Execution
- 10.4 raise method
- 10.5 “else” and “finally”
- 10.6 user Defined Exception

Advanced Python:

11.OOP concepts

- 11.1 document string
- 11.2 Inheritance and Types
- 11.3 Data Hiding (Access Specifier)
- 11.4 Decorators
- 11.5 Polymorphism
- 11.6 Method Resolution Order

12.Regular expression

- 12.1 match and search method
- 12.2 flags (re.I and re.M)
- 12.3 findall method
- 12.4 sub and split method
- 12.5 detailed explanation on literals and anchor symbols

13.Database

1. SQLite3 Execution
2. Basic of Tkinter implementation
3. Code with Exception
4. Basics of ORM implementation

14.Networking

- 14.1 Socket Basics
- 14.2 Client and Server Message Sharing Code
- 14.3 Paramiko and Netmiko Basics

15.Multi-threading

- 15.1 Multithreading Basics
- 15.2 Difference between Multithreading and Multiprocessing

15.3 Concurrency and Parallel Execution Thread

16.File Operation (txt file)

- 16.1 Context Manager
- 16.2 Basic File Operation (read, write, append)
- 16.3 tell() and seek() method

17.Date Time Manipulation

- 17.1 import datetime and time
- 17.2 Change time format
- 17.3 Adding Hours, minutes and Seconds

18.Import and Packages

- 18.1 Path Reference
- 18.2 Optimized Code Execution
- 18.3 Circular Import
- 18.4 __name__ and __main__ explanation

19. Mongo DB

- 19.1 Introduction
- 19.2 Data Modelling
- 19.3 Data Types
- 19.4 DB Operation – 1
- 19.5 DB Operation – 2
- 19.6 Modelling Relationship
- 19.7 PyMongo

20. Flask

- 20.1 API Introduction
- 20.1 Hosting a website and server concepts
- 20.3 Difference between Django and Flask
- 20.4 Input Files and Output Files (JSON)
- 20.5 Flask Running with Example
- 20.6 Tools for Testing (PostMan or Insomania)

21. Django

- 21.1 Django Essentials
- 21.2 API Creation
- 21.3 IP and PORT Change
- 21.4 Admin Page Accessing
- 21.5 Rendering HTML internally and Externally
